

Unlock Faster, Smarter Risk Reduction with Seemplicity AI

SOLUTION BRIEF

Security data is growing, but actionable insight is not. Seemplicity's AI capabilities bridge this gap – transforming vulnerability, risk, and remediation data into clear, contextual guidance that accelerates decisions and action across your exposure management lifecycle.

From automating insight generation to powering smarter workflows, Seemplicity AI is designed to help you reduce noise, save time, and act faster – without compromising on data control or trust.

AI That Respects Your Privacy: Opt-In, Not Always-On

AI in Seemplicity is fully opt-in and off by default. Admins have full control over activation. If enabled, the AI system operates entirely within the Seemplicity platform – without exposing your data to external tools or vendors.

YOUR DATA IS:

- ✗ Not used to train AI models
- ✗ Not stored in the AI engine
- ✗ Not used for automated decision-making

Seemplicity only processes the latest saved content, giving you control and transparency every step of the way.

Key Features

1 AI INSIGHTS | From Data to Decisions

Seemplicity uses AI to transform dense dashboards into prioritized, shareable insights.

Automated Insight Generation

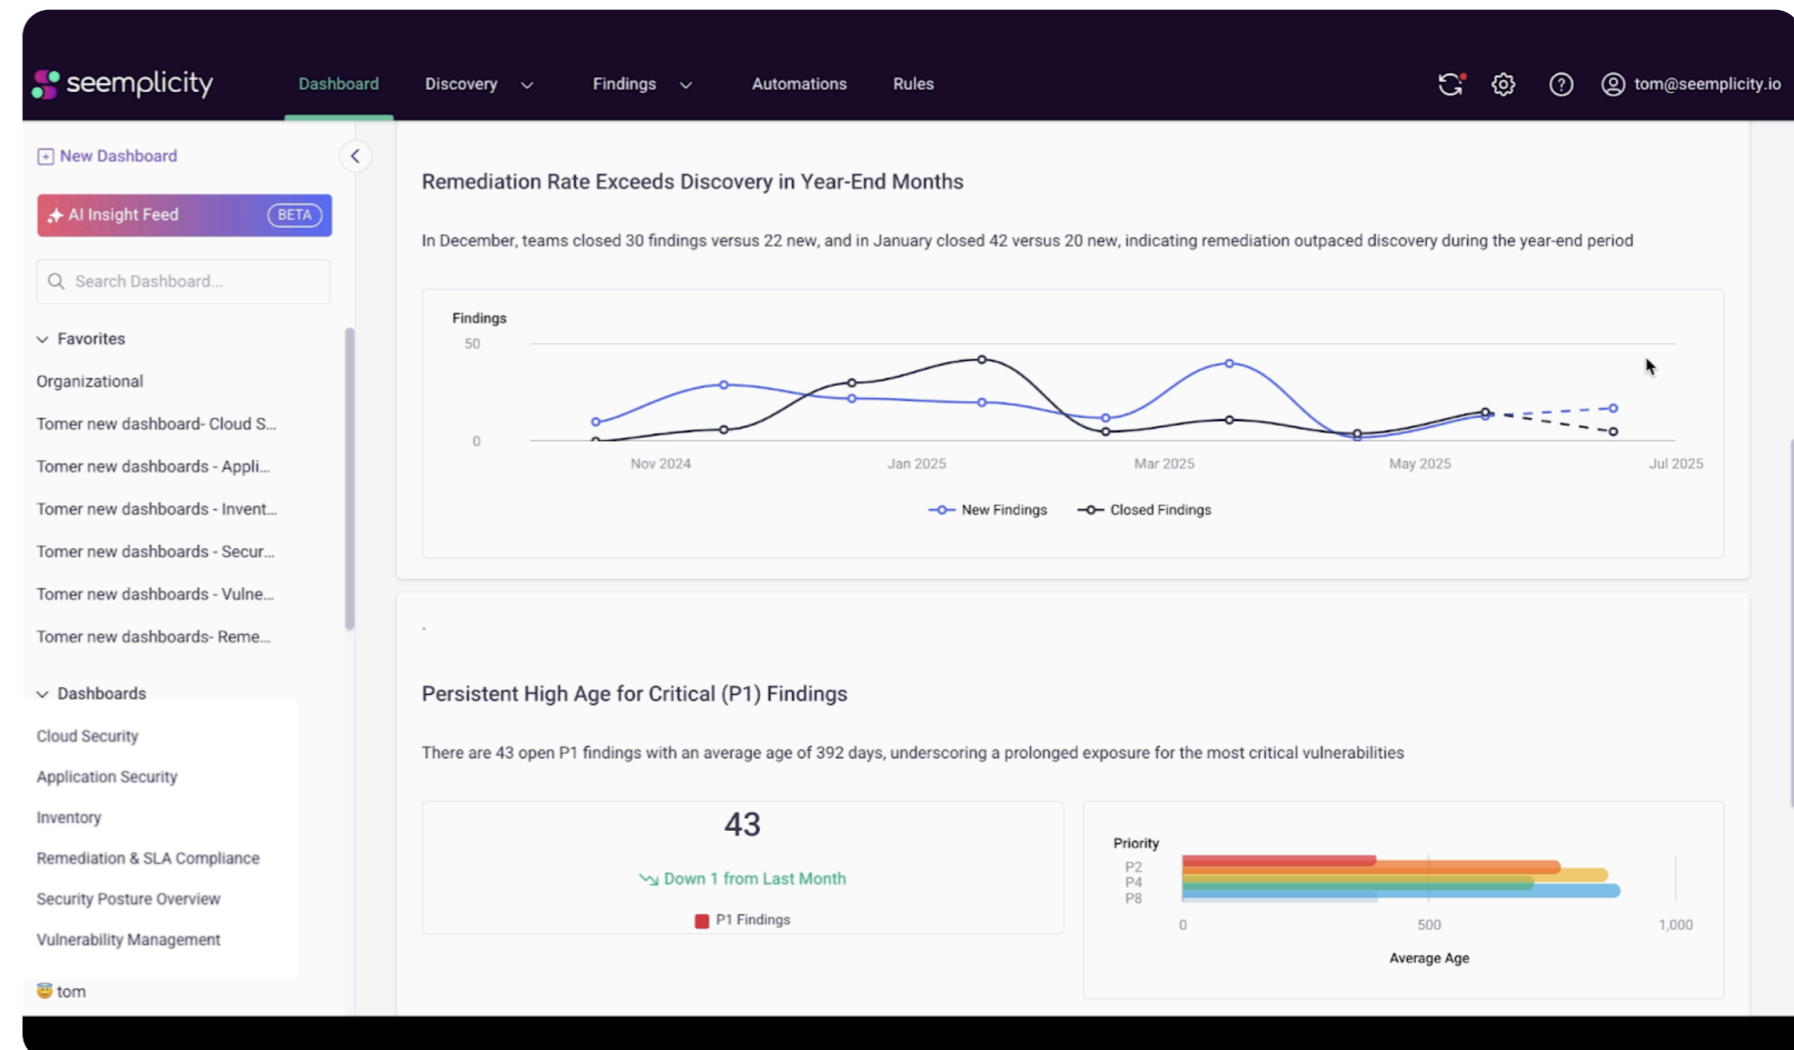

Highlights critical insights based on your real-time data.

Prioritized Intelligence

See what matters most.

Collaborative Sharing

Share insights directly inside workflows for faster alignment.

RESULT Visualize less, understand more, act faster.

2 REMEDIATION STEPS | From Assigned to Resolved

Stop wasting time deciphering vague remediation instructions. Seemplicity AI embeds precise, asset-specific guidance into each finding.

Asset-Specific Fixes

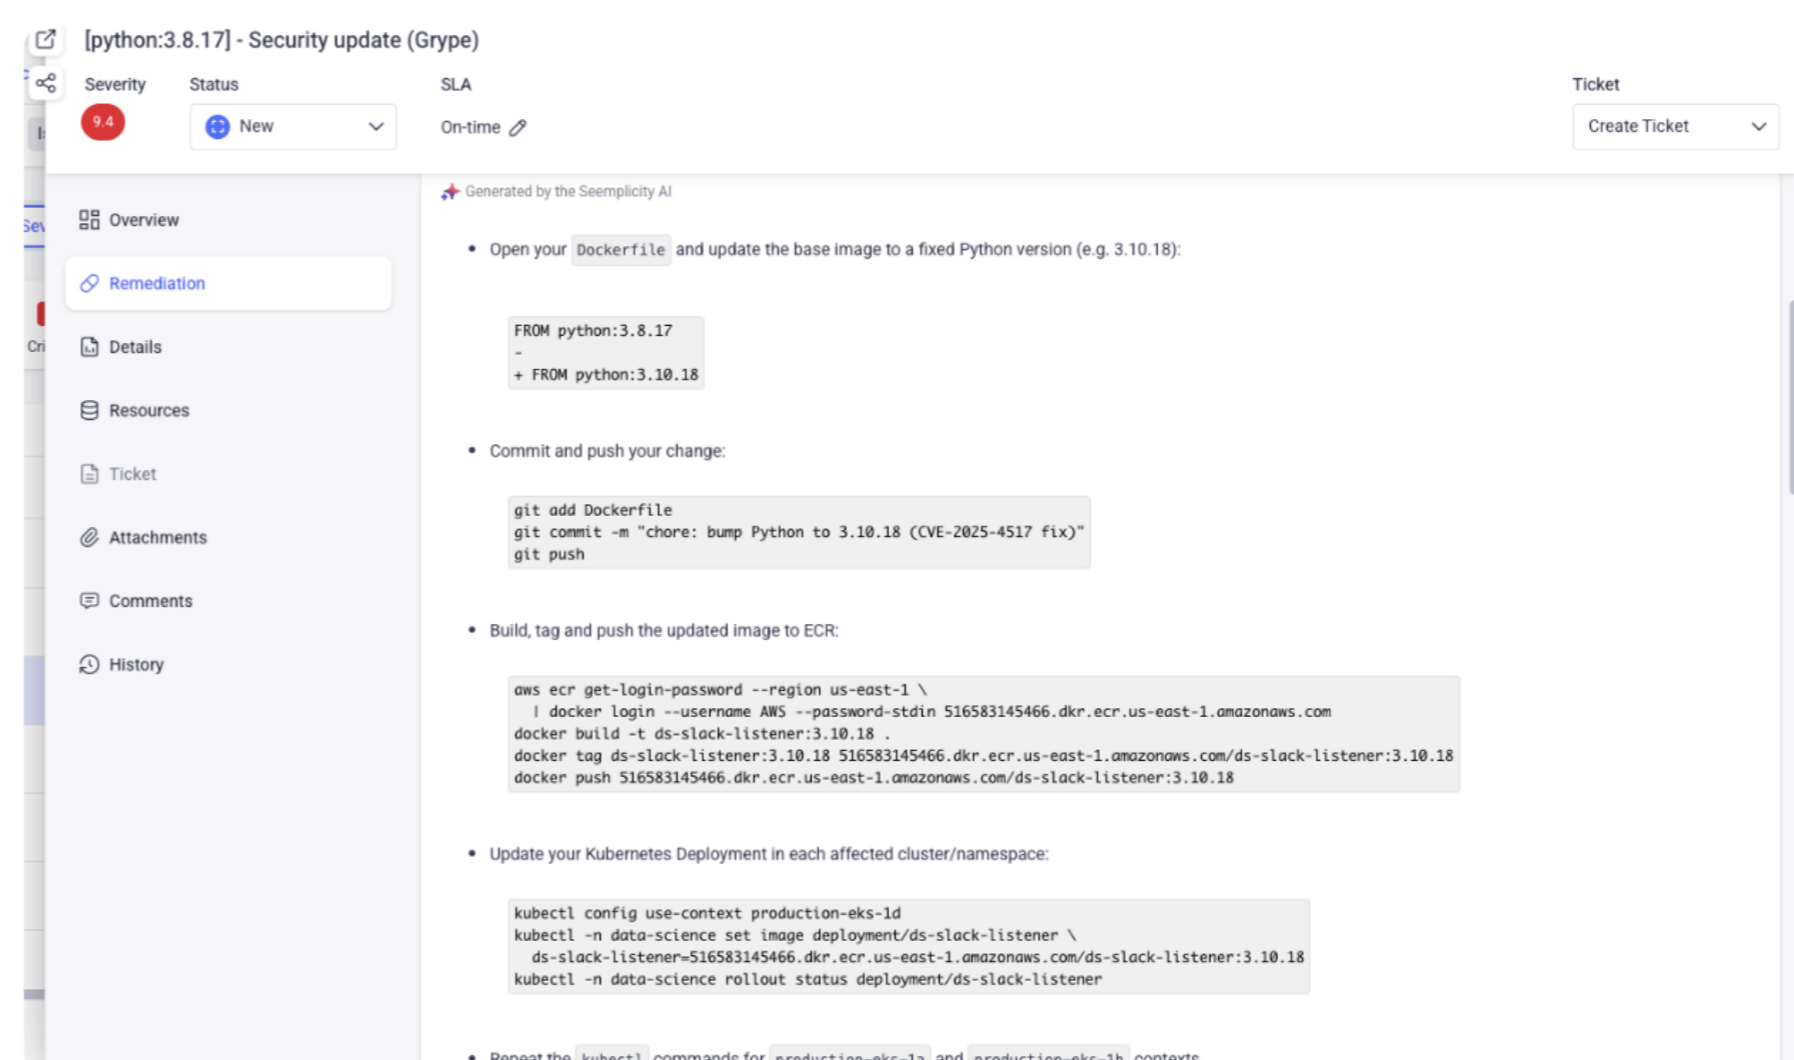

Tailored for containers, web servers, libraries, and more.

Step-By-Step Instructions

Clear, actionable fixes mapped to real-world workflows.

Consistency Across Teams

Standardized guidance improves resolution quality.

RESULT Engineering teams resolve faster – with confidence and consistency.

3

SMART SCOPING & TAGGING | Structure That Thinks for You

Seemplicity makes it easy to organize your exposure data using built-in intelligence. Instead of relying on manual tagging or static filters, the platform uses AI to auto-classify, enrich, and maintain organizational clarity.

Automatic Scoping

AI suggests relevant attributes (e.g., environment, ownership, unit) and builds dynamic branching structures based on your org's actual setup.

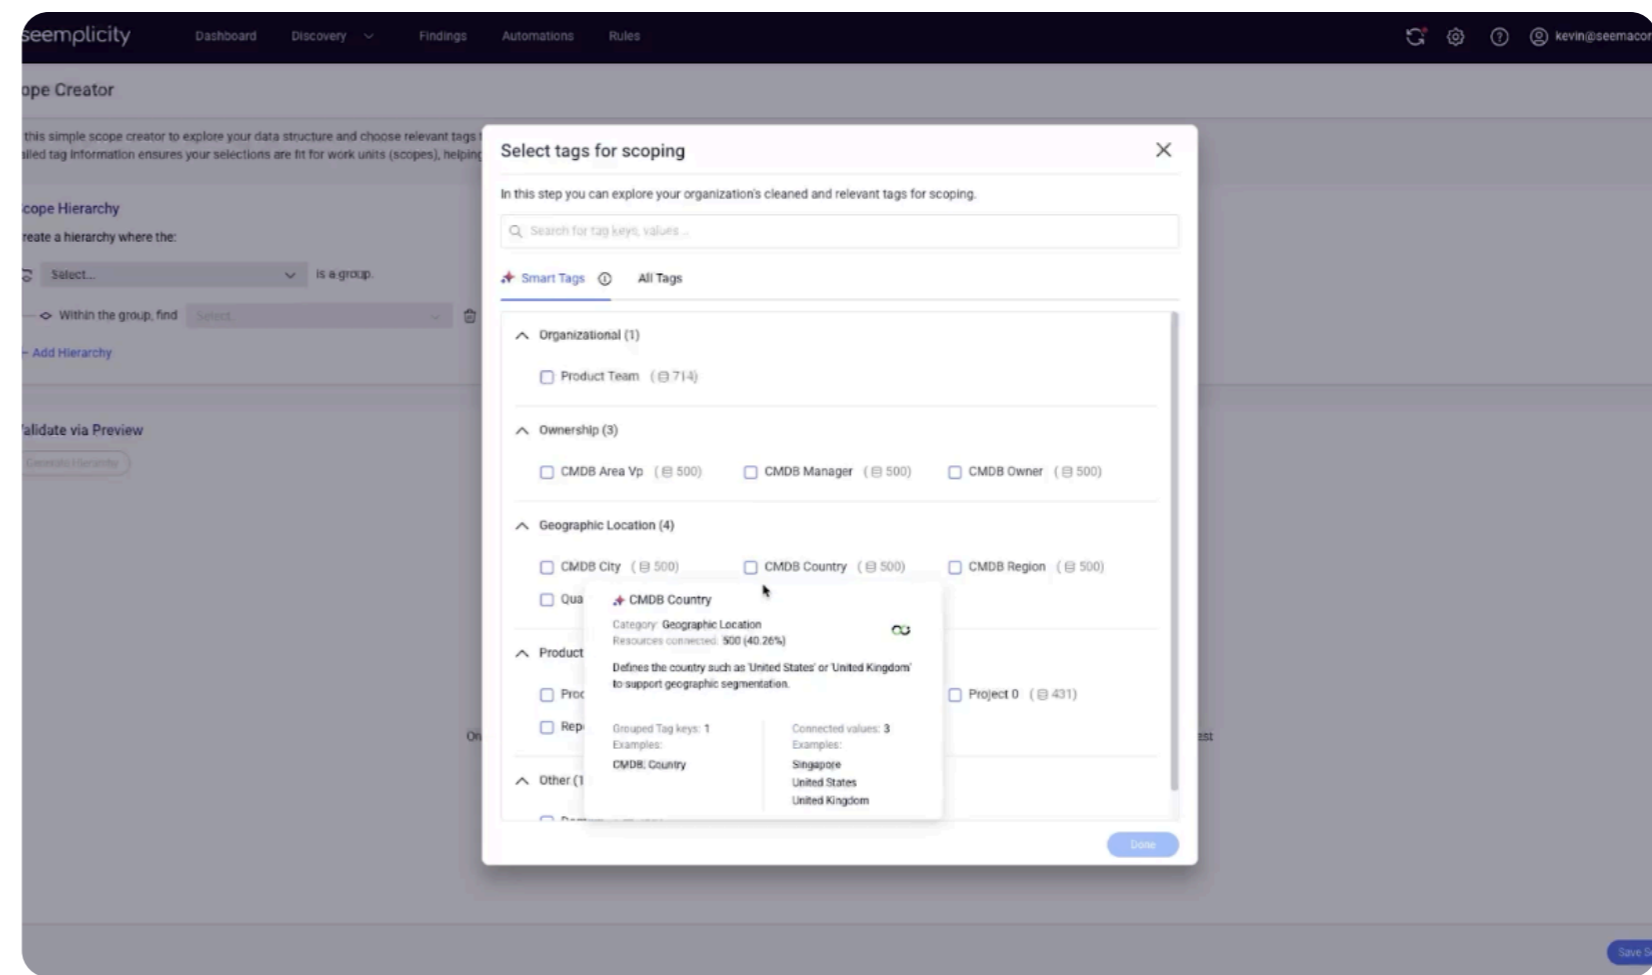

Suggested Scope Names

When saving scopes or filters, Seemplicity suggests clear, relevant names using field-based AI logic (editable, with regenerate options).

Smart Tags

Tags are grouped by category (Org, Product, Env, etc.), include descriptions and icons, and help eliminate noise or mislabeling.

RESULT Cleaner data, faster scope creation, and a structure that adapts with you.

4

AI-ENHANCED FINDING DESCRIPTIONS | Readable, Relevant, Ready to Act

Scanner output isn't always presented in the most readable format. Seemplicity uses LLMs to turn complex findings into clear, concise, and actionable summaries.

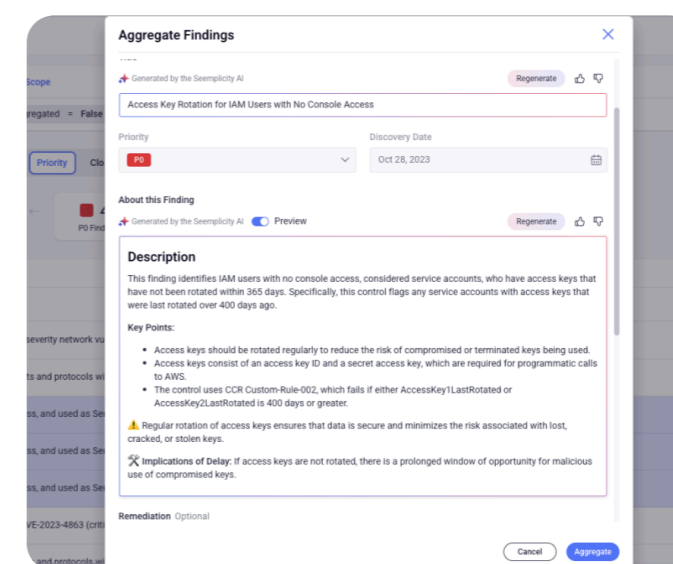

Single Findings

Use the AI-powered toggle to instantly generate digestible descriptions and remediation steps for individual issues.

Aggregated Findings

When grouping multiple issues, AI generates a unified description and fix plan tailored to the full scope. You can preview, regenerate, and edit freely.

RESULT Whether you're reading one issue or many, your team gets the context they need – without the technical fog.

5

SEEMA | From Questions to Answers

Stop spending time navigating dashboards to find simple answers. Seema is Seemplicity's AI-powered chat assistant that turns natural-language questions into clear, data-backed insights across findings, assets, scopes, queues, and SLAs.

Natural-Language Queries

Ask direct questions about exposure data and progress and get straightforward answers

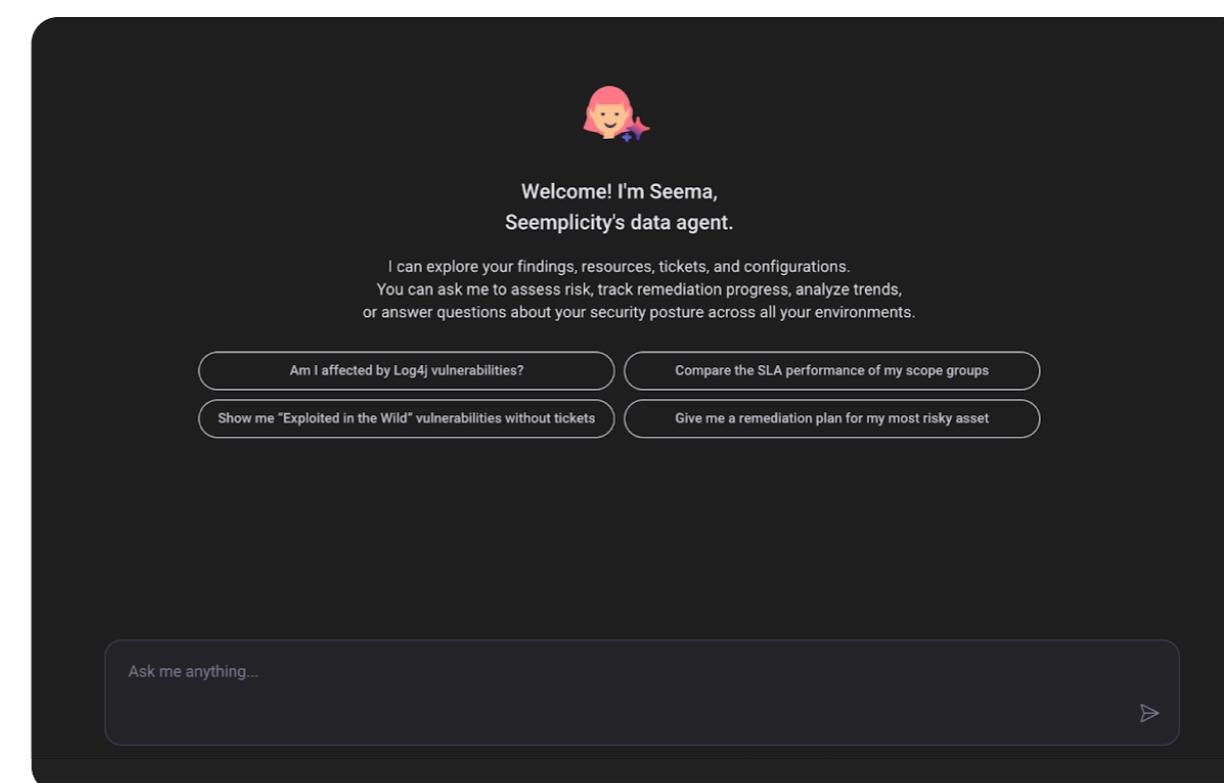

Unified Security Context

Connect findings, resources, and ownership in a single, explainable response.

Clear Summaries & Visuals

Get concise explanations and visual insights grounded in your live Seemplicity data.

RESULT Faster understanding, quicker decisions, and less time spent searching for insight.

Turn Intelligence into Action

Seemplicity AI transforms how security teams understand and respond to risk – from insight to remediation. Whether you're streamlining scope creation, fast-tracking fixes, or cutting dashboard noise, Seemplicity AI delivers clarity and speed at every step.
