

The **Seemplicity** RemOps Platform

SOLUTION BRIEF

Remove the Bottlenecks in Remediation

Vulnerability management teams don't have a finding problem, they have a fixing problem. Testing tools generate millions of alerts, but getting them to the right remediation teams, in the right format, to fix them is the bottleneck. Siloed data, inefficient workflows, and manual coordination slow remediation, leaving organizations exposed to risk.

Powered by AI, Seemplicity's Remediation Operations Platform removes bottlenecks by streamlining data, automating workflows, and delivering relevant insights to development, cloud, and IT operations teams, as well as leadership and auditors, in the way each group needs them. Fixers get clear, actionable tickets in their workflows, auditors get real-time reporting, and leadership gains visibility into risk reduction. No more chasing down teams or drowning in spreadsheets – just faster fixes, fewer exposures, and reduced risk.

THE SEEMPLICITY PLATFORM OFFERS:

Faster fixes, fewer delays

Automated triage and tailored remediation plans keep exposure management moving smoothly and efficiently.

Clear accountability, better execution

Every team gets relevant risk and remediation data right where they work, so nothing falls through the cracks.

Real-time visibility and reporting

Track progress, prove impact, and stay ready for audits without the scramble.

Stronger, more seamless collaboration

Unify security, remediation, and compliance teams with streamlined workflows, and aligned priorities.

SLA Compliance

How it Works

Unlike traditional posture tools or ticketing systems, Seemplicity doesn't just track — it drives resolution. It consolidates findings from security scanning tools, assigns and routes fix requests via integrated ticketing systems, all while tracking remediation progress and SLA compliance. With Seemplicity, organizations shift from reactive vulnerability management to a proactive, scalable, and measurable remediation strategy.

The Seemplicity RemOps Platform fits into every step of existing remediation processes with intuitive and innovative features. Whether consolidating findings, assigning ownership, or tracking SLA progress, Seemplicity brings speed, clarity, and control to every phase of remediation.
